Career Objective

Fresher with strong programming skills and practical experience in web and software development technologies. Completed internships and virtual simulations providing industry exposure to backend development, data processing, and UI/UX design. Proficient in Python, Django, JavaScript, HTML, CSS, and database management. Highly motivated to learn, adapt, and contribute to delivering scalable and efficient IT solutions. Seeking an entry-level role to apply technical expertise and collaborate within dynamic development teams.

Work Experiences 6m

Web Development Intern

Oasis Infobyte

Mar'23 - Apr'23 2m

Virtual

While working as an intern, I worked on web projects, which improved my development abilities and teamwork skills.

Software Engineering Virtual Experience (Job Simulation)

Walmart Global Tech (via
Forage)

Apr'25 - May'25 2m

Completed a self-paced virtual internship simulating real-world software engineering tasks at Walmart. Worked on developing a custom heap in Java for optimizing shipping logistics, designing UML and ER diagrams for data systems, and performing data munging in Python. Projects focused on database design, algorithm efficiency, and data preprocessing.

Foundations of AI

Microsoft (via Edunet Foundation
& AICTE)

Apr'25 - May'25 2m

Successfully completed a comprehensive 4-week internship focused on the Foundations of AI, a distinguished Microsoft initiative. During this program, I acquired practical knowledge and honed skills in core artificial intelligence concepts, culminating in the successful

development and completion of a practical career suggestion AI project.

Projects 4

Tic-Tac-Toe Game

Mar'24 - Mar'24

Developer

Developed an interactive Tic-Tac-Toe game utilizing Python, employing NumPy for game logic and Pygame for graphical rendering.

Python NumPy Pygame

Automobile page

Mar'23 - Mar'23

developer

Developed a responsive automobile showcase website using HTML, CSS, JavaScript, and JSON to display specifications of sports bikes and supercars under the fictional brand Vortex. Implemented a single-template design with dynamic content loading for scalability and ease of maintenance. Included clean UI, smooth navigation, and an 'Enquire Now' section to simulate a real-world product landing page | Live Site

HTML CSS Javascript Json Bootstrap

Online Store

Apr'25 - present

Developer

Developed and contributed to a fully functional e-commerce web application using Python, Django, HTML, and CSS. Implemented core features including user authentication, product listing, product grouping by category, and individual product detail views. Designed responsive front-end interfaces for improved user experience, and structured back-end logic for data handling and routing.

Django Python HTML CSS Bootstrap

AI-Based Career Suggestion Chatbot

Apr'25 - May'25

Designed and developed a chatbot capable of suggesting suitable career paths based on user inputs. Created and structured a dataset of 100+ career options with associated keywords and weights.

Implemented a keyword-matching logic using Python and Scikit-learn to match user preferences to careers. Built an interactive web interface using Streamlit .
